

# ENTERPRISE DATASHEET

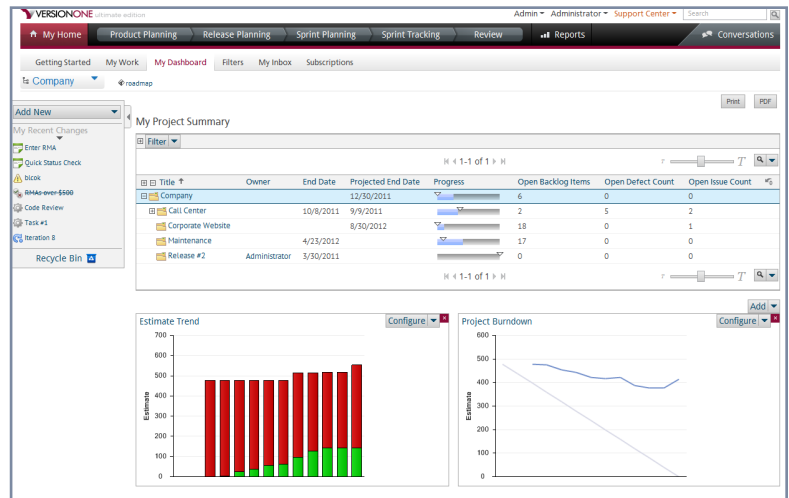

## ENTERPRISE EDITION

### Datasheet

*A comprehensive, easy-to-use management tool that scales with organizations by simplifying the planning and tracking of agile software projects.*

### ENTERPRISE EDITION IS:

- Ideal for organizations managing multiple Agile projects, teams or sites
- Designed as a comprehensive agile lifecycle management tool
- Built specifically to support any agile methodology - Scrum, Extreme Programming (XP), DSDM, AgileUP and Custom/Hybrid
- Deployable in minutes as either an on-demand or on-site solution
- Extensible via the VersionOne API/SDK and open-source reference integrations

Customizable My Dashboard is an ideal one-stop reporting location for anyone managing multiple projects, releases and/or teams

### KEY FEATURES & BENEFITS

- Cross-project teams and team scheduling can segment large-project workload or track individual teams as they move across multiple projects. In either case, each team's progress can be tracked separately and by project.
- Customizable Dashboard allows executives, managers and anyone managing multiple teams or projects to create a quick view of key metrics and graphs showing the progress and status of any number of releases and teams. Tracking multiple projects, releases and teams at the individual and rolled-up levels in the same view makes it easy to determine the status of a particular project or team.
- Intelligent Release Forecasting including "what if" scenarios calculates the number of iterations required to complete a release under different circumstances and the end date of the last required iteration to reach project completion.
- More than fifty out-of-the-box reports provide in-depth, single- or multi-level insight into the progress, status and trends of projects, releases, iterations, teams, stories, defects, tests, issues and requests. Reports such as project summary, scope change, detail estimate trend (estimates vs. actual), parking lot and member load trend provide invaluable project insight to help keep projects on schedule and on budget.
- My Home is a configurable portal that lets team members specify their relevant projects, work items, data, metrics and dashboards. A wide variety of portals such as owned projects, iterations, tasks, test, stories, defects, etc., can be added and filtered to fully customize the information being tracked and reported.

# ENTERPRISE DATASHEET

## BUSINESS CHALLENGE

The ever-growing demand for better software – in the form of new applications or enhancements that drive revenue – delivered on time and on budget has accelerated the adoption of agile development across companies large and small in all parts of the world.

But simply saying “we’re agile” doesn’t necessarily deliver the promise of rapid delivery and flexibility while maintaining quality. Without the appropriate support for distributed teams including stakeholders outside the development organization, complex or multi-phase development projects and in-depth visibility into projects and progress on a daily basis, the value of adopting agile development may not be fully realized.

## BUSINESS NEEDS

- Centralized planning and tracking in a single system for teams working on more than one project and projects that involve more than one team
- Team scheduling that tracks multiple teams working on different functionality delivered in a single project or release
- Project forecasting to determine the number of iterations required to complete a release
- In-depth metrics and overarching views into the progress, status and trends of projects, releases, iterations and teams
- Custom displays give team members at-a-glance visibility into projects, releases, tasks, tests and other items they are working on

## OUR SOLUTION

To help ensure success using agile methodologies, enterprises worldwide have made Enterprise Edition the #1 Agile project management software choice for any type of agile methodology.

Enterprise Edition provides support for cross-project teams, release forecasting, customizable dashboards, visual task and testboards, built-in agile workflow and more than fifty agile metrics and reports, offering unparalleled insight into projects.

Our application provides out-of-the-box agile processes within and across large, multi-team projects and multi-project teams. Only VersionOne covers the full lifecycle of agile processes from the first item entered in the backlog to the project’s delivery.

## SYSTEM REQUIREMENTS

### On-Demand (hosted)

- Browser: Internet Explorer 7, 8, 9 Mozilla Firefox 7 Chrome 14 Safari 5
- Operating System: Windows (XP, 2003, 2008, 7) Mac OS 10.3+ Linux
- Processor: 1 GHz
- Memory: 512 MB RAM

### Notification Readers

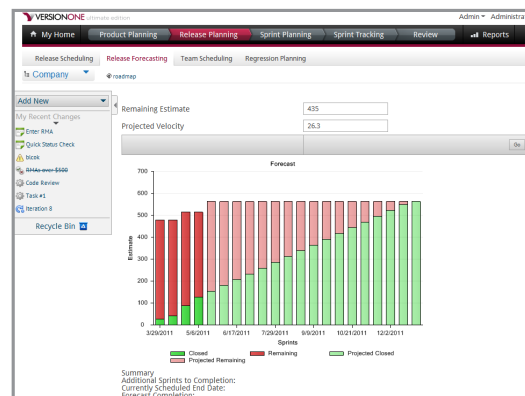

- Applications with built-in RSS readers: Outlook 2007 Internet Explorer 7 Thunderbird 1.5 Firefox 2
- Web based RSS readers: Google Reader

### On-Site (local)

- Operating System: Windows 2003, 2008, 2008 R2 32-bit (x86) or 64-bit (x64)
- Web/Application Server: Internet Information Server (IIS) 6, or 7, 7.5 with ASP.Net installed
- Framework: Microsoft .NET 3.5 SP1
- Database: Microsoft SQL Server 2005, 2008\*, 2008 R2 with full text search component
  - SQL 2008 must be patched to a minimum of version 10.0.1767. See VersionOne knowledge base article Q11425 for more information
- Processor: 2 GHz
- Memory: 2 GB RAM

## ENTERPRISE EDITION HELPS YOU:

- Instantly gain unparalleled insight into agile projects through more than sixty Agile metrics, reports and dashboards
- Quickly set up and view a single, customizable page of vital metrics and charts for multiple projects, releases, iterations or teams
- Easily collaborate on project plans, priorities and progress with all project stakeholders – project managers, developers, testers, product owners, customers and software executives
- Consistently monitor the progress and status of stories, defects, tasks, tests and team member work items through easy-to-use dashboards
- Efficiently scale agile software development within and across large, multi-team and multi-program projects

“What if?” release forecasting helps users analyze and accurately predict delivery dates based on remaining scope of work and team velocity

VersionOne is recognized by agile practitioners as the leader in agile project management tools. By simplifying the planning and tracking of agile projects, we help teams deliver better software faster. Since 2002, companies such as Adobe, Boeing, Lilly, Lockheed Martin, Oppenheimer, Qualcomm, Sabre and Siemens have turned to VersionOne. Today more than 30,000 teams from over 170 countries use VersionOne.
