VERSIONONE®
Agile Made Easier

Enterprise Agile Success

Capable 👍

GOAL Achieving *enterprise agile capability* for teams at all levels of your organization

Most organizations begin exploring and achieve ad hoc capability through self-learning, experimentation, and limited training and consulting. Once organizations have had some initial success with agile, the goal expands to align teams at all levels of the organization. Leveraging initial success requires an organized approach. VersionOne provides a solution to enable this broader agile capability.

Are you ready?

- Are cross-functional challenges becoming primary impediments?
- Is project funding misaligned to agile practices?
- Is your legacy code difficult to modify in small iterations?
- Is there a lack of business involvement in your agile initiative?

Benefits of Capability

- Understand your portfolio to delivery value stream
- Effectively launch agile programs
- Improve business and team alignment
- Achieve team-level predictability
- Improve quality

Education Activities

Learn agile and lean practices, along with how to practice with the VersionOne platform, to overcome cross-functional challenges, increase visibility at all levels, and increase the speed of your teams.

- Agile/Lean Practices

Enterprise Agile Success

Through our decade of leading organizations to understand and achieve agility, VersionOne has defined five levels of capability for organizations as they adopt agile approaches. Understanding current capability and business goals allows a transition strategy to be developed that is focused and efficient.
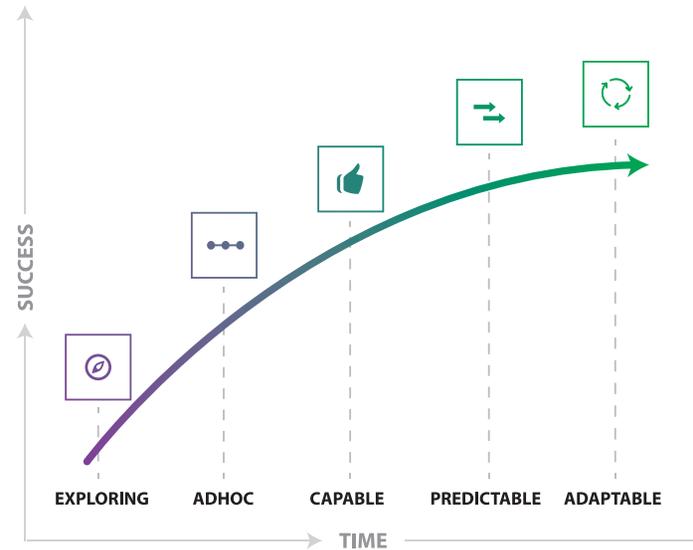

Experimenting with agile in pockets
No initiative to achieve enterprise agility

Considering an agile initiative
Limited to a small portion of the organization
Most processes are status quo

Agile practices and techniques being used
Use of agile still maturing
Performance variance improving

Practices refined and impediments removed
Performance results in accurate Release Planning

Predictability has enabled business decisions to adapt to current market condition
